

PL/SQL_Exercise-1

Scenario 1: Apply Discount to Loan Interest Rates

Question:

The bank wants to apply a discount to loan interest rates for customers above 60 years old.

Code:

```
BEGIN

  FOR rec IN (

    SELECT c.CustomerID, l.LoanID

    FROM Customers c

    JOIN Loans l

    ON c.CustomerID = l.CustomerID

    WHERE c.Age > 60

  )

  LOOP

    UPDATE Loans

    SET InterestRate = InterestRate - 1

    WHERE LoanID = rec.LoanID;

  END LOOP;

  COMMIT;

  DBMS_OUTPUT.PUT_LINE('Interest rates updated successfully.');
```

END;

Verification Query

```
SELECT * FROM Loans;
```

Screenshot of output:

The screenshot shows the FreeSQL web interface. The SQL query entered is:

```
1 BEGIN
2 FOR rec IN (
3   SELECT c.CustomerID, l.LoanID
4   FROM Customers c
5   JOIN Loans l
6   ON c.CustomerID = l.CustomerID
7   WHERE c.Age > 60
```

The query result is displayed in a table with the following columns: LOANID, CUSTOMERID, INTERESTRATE, and DUEDATE. The results are as follows:

	LOANID	CUSTOMERID	INTERESTRATE	DUEDATE
1	201	101	6.5	7/12/2026, 12:10:11
2	202	102	9	8/16/2026, 12:10:11
3	203	103	5.8	7/22/2026, 12:10:11
4	204	104	8.2	8/31/2026, 12:10:11
5	205	105	5.5	7/17/2026, 12:10:11

Scenario 2: Promote Customers to VIP Status

Question:

A customer can be promoted to VIP status based on their balance.

PL/SQL Code:

```
BEGIN
```

```
FOR rec IN (
```

```
  SELECT CustomerID
```

```
  FROM Customers
```

```
  WHERE Balance > 10000
```

)

LOOP

UPDATE Customers

SET IsVIP = 'TRUE'

WHERE CustomerID = rec.CustomerID;

END LOOP;

COMMIT;

DBMS_OUTPUT.PUT_LINE('VIP customers updated successfully.');

END;

/

Verification Query

SELECT * FROM Customers;

The screenshot displays the FreeSQL web application interface. The top navigation bar includes the FreeSQL logo, a 'Worksheet' tab, and a 'SQL Tutorials' section. The left sidebar shows a 'Navigator' with 'My Schema' and 'Tables' sections, listing 'CUSTOMERS' and 'LOANS' tables. The main workspace contains a SQL editor with the following code:

```
1 BEGIN
16 END;
17 /
18 SELECT * FROM Customers;
```

Below the editor, the 'Query result' tab is active, showing the execution time as 0.006 seconds. The results are displayed in a table with the following columns: CUSTOMERID, CUSTOMERNAME, AGE, BALANCE, and ISVIP.

	CUSTOMERID	CUSTOMERNAME	AGE	BALANCE	ISVIP
1	101	John	65	12000	TRUE
2	102	Alice	45	8000	FALSE
3	103	David	70	15000	TRUE
4	104	Emma	55	9000	FALSE
5	105	Sophia	62	20000	TRUE

The right sidebar features 'SQL Tutorials' with a search bar and two tutorial cards: 'Creating Tables: Databases for...' and 'Joining Tables: Databases for...'. The bottom of the page contains a footer with various links and a copyright notice for 2015-2026 Oracle.

Scenario 3: Loan Due Reminder

Question:

The bank wants to send reminders to customers whose loans are due within the next 30 days.

PL/SQL Code

```
BEGIN

  FOR rec IN (

    SELECT c.CustomerName,

           l.LoanID,

           l.DueDate

    FROM Customers c

    JOIN Loans l

    ON c.CustomerID = l.CustomerID

    WHERE l.DueDate BETWEEN SYSDATE AND SYSDATE + 30

  )

  LOOP

    DBMS_OUTPUT.PUT_LINE(

      'Reminder: Dear ' ||

      rec.CustomerName ||

      ', your Loan ID ' ||

      rec.LoanID ||

      ' is due on ' ||

      TO_CHAR(rec.DueDate, 'DD-MON-YYYY')

    );

  END LOOP;

END;
```
